March 1, 2024

The Borough of Oakland is proud to announce that two (2) new PFAS (“per- and polyfluoroalkyl substances”) treatment facilities have been installed at Well 5 and Well 10 and are currently operational. Initial laboratory test results returned as “not detected” for PFAS chemicals. PFAS chemicals do not occur naturally but have been found in the underground aquifer from which the Borough draws its water, possibly from past industrial discharges. This project was completed in accordance with the Borough’s agreement with the NJDEP. Additional information regarding PFAS may be found on the Borough’s website.
